8 Shocking Downtime Stats in Healthcare

When systems go down, patient care and your bottom line are at risk. Downtime isn't just inconvenient, it's expensive, dangerous, and increasingly common in healthcare settings. From lost revenue to compromised patient data, the consequences are staggering. Read our infographic to see 8 shocking stats about downtime.

1

$7,900 is the average cost of downtime for hospitals, per minute.

2

$500,000+ is the cost of one hour of disruption that can exceed half a million dollars in lost revenue and operational impact.

3

96% is the percentage of healthcare institutions that experienced at least one unplanned EHR downtime in the last three years.

4

70% of Downtime incidents lasted more than eight hours.

5

80% is the percentage of patient data that lives outside of the EHR, often inaccessible during downtime.

6

$20 B is the average annual cost tied to paper-based processes across the healthcare industry.

7

$50,000 per violation is how much potential penalties can result in after a downtime scenario that leads to data breaches and non-compliance.

8

$10.93 M is the cost per data breach, which healthcare has the highest average cost per data breach of any sector.

Don't Let Downtime Cost You

Be prepared before downtime strikes. dbtech's Downtime Workstations at just $299 each and provide fast, secure access to critical patient data, even when your EHR is offline. With automatic syncing, built-in compliance, and seamless integration, your staff can continue care without interruption. Talk to our team today to get started.

See how your organization can reduce costs, mitigate risks and increase patient satisfaction.
