

DOWNTIME SOLUTION

Your medical facility depends on the collection and accessibility of reliable and timely patient information, yet EHR and network downtimes are inevitable, occurring without notice due to software updates, hardware failures and ransomware.

The impact is universal. Patients, providers and support staff feel the pain of downtime events: the quality of patient data deteriorates, the potential for duplicate medical record numbers increases, and staff spend excessive time recovering. Recovery is time consuming and includes registering all patients from handwritten forms into the EHR, scanning photocopied documents, and printing forms and labels.

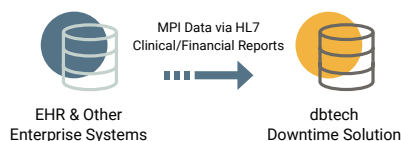

The Downtime Solution from dbtech drastically reduces the negative effects of downtime events. Prepare today for future downtime events and boost the confidence of your team with a reliable, comprehensive solution.

KEY FEATURES

- EHR and Network Downtime Protection
- Access to In-House Patient Data including Census and MAR
- Replace Paper-based Downtime Procedures with Electronic Data Entry
- Use Facility's Downtime Registration Numbers
- Print Barcoded Wristbands, Labels and Consent Forms
- Scan Patient Documents – Eliminate Photocopying
- Bi-Directional Electronic Data Interface allows for Real-Time Updates into the Downtime Solution and Rapid Recovery after the Downtime Event

THE DOWNTIME PROCESS
