

eFORMS

SAVE TIME. CUT COSTS.

Although technology has come a long way, problems in hospitals and clinics associated with paper storage and handling still remain. In most cases, large amounts of paper accumulate over time creating productivity and organizational challenges.

Each hospital uses thousands of forms each day and they are not all electronic. That usually means each hospital must order pre-printed forms and keep a large quantity in stock creating additional costs for both the forms and forms storage. In addition, 30% of hospital staff's time is spent on manually processing forms creating inefficiencies in all areas including patient registration, clinical areas, finance, HR and administration.

eForms gather information from any relevant data source and eliminate the need for pre-printed forms and the stacks of paper on which they are printed. eForms can even create bar-coded forms, which makes it easy to keep all actionable data in one patient folder eliminating many manual processes.

SEAMLESS INTEGRATION WITH YOUR EXISTING SYSTEM

MEDITECH

Epic

- Reduce the time it takes to complete forms at registration by automating the process and increase patient satisfaction scores.
- By automating the forms process with eForms, areas within the hospital can become truly paperless.
- Completed forms can be sent back to your EHR instantly.
- Automatic bar coding of forms and wristbands with patient information ensures positive patient ID.
- Implementing electronic patient signature in all departments eliminates the need to scan documents in after each encounter.

Contact dbtech today to experience an eForms Solution that delivers cost savings while streamlining processes. Schedule a demo today.
