

Simplify Workflows & Secure Patient Data with dbtech Solutions

Healthcare providers depend on Electronic Healthcare Records (EHR) to capture and secure patient data, while providing physicians and staff quick access to accurate patient information at the point of care. It's critical for hospitals and physician offices to consider and plan for a downtime solution if the digital records management system fails, experiences a break in service, or becomes the subject of a ransomware attack.

With its full suite of Document Management and Downtime Solutions, dbtech's solution is designed specifically for healthcare. Our modular system streamlines your workflow, improves processes, and significantly cuts costs.

DB TECH SOLUTIONS

- Downtime
- eForms
- eFolders
- Ras
- Charity Care

Automate Healthcare Workflows to Reduce Costs

Seamlessly Integrates with EHR Systems (Epic, Cerner, MEDITECH, etc.)

Scale for Future Growth with Modular System
