

# RAS ARCHIVING

For decades, hundreds of customers like you have relied on Ras from dbtech for the secure distribution, automation and archiving of documents and data. Content including financial and patient information, employment records and vendor contracts, from systems such as Cerner, Epic, Meditech and Infor, has been captured, automated and archived using Ras.

Hospitals across the country have used Ras to monitor any accessible data source for reports, interface transactions, scanned images, spreadsheets, PDF files or any other file type recognized by Microsoft Windows®. Ras identifies these files using proprietary pattern matching technology. All data is encrypted, made available to users immediately, and safeguarded through role-based access and detailed audit logs.

Using Ras to archive content from other platforms provides significant time and cost savings:

- Eliminate hardware and support expenses for retired platforms
- Maintain compliance with retention policies
- Avoid penalties due to unsuccessful audits
- Eliminate paper documents

## RAS ARCHIVING BENEFITS

- ✓ Single Solution for All Retired Platforms
- ✓ Reduce Software, Support, and Hardware Costs
- ✓ Archive Documents of Any File Type
- ✓ Secure, Role-based Access to Data
- ✓ Complete Audit Trails
- ✓ Data Retention Policies
- ✓ Intuitive User Interface
