

7 Things to Do During a MEDITECH Outage

When MEDITECH goes down, your team needs more than paper. Here are 6 things your staff can do to keep operations running electronically with dbtech's Downtime Solution.

01 Register New Patients

Electronically register patients and create new encounters without interruption.

dbtech integrates a bank of downtime encounter numbers to keep admissions accurate.

02

Access the Patient Census & MARs

View up-to-date census data and medication administration records instantly.

dbtech continuously syncs patient data via HL7 so your team always has the latest information.

03 Print Wristbands & Labels

Print barcoded wristbands, specimen labels, and consent forms without manual writing.

All printing workflows remain fully electronic throughout the outage.

04

Capture eForms & eSignatures

Complete consent forms and clinical documentation electronically using dbtech's eForms solution.

Capture patient signatures digitally, no paper forms required.

05 Scan IDs & Insurance Cards

Scan patient identification documents and insurance cards directly into the downtime system.

All scanned documents are stored securely and pushed back to MEDITECH upon recovery.

06

Recover When MEDITECH Returns

A single click initiates outbound HL7 transfer, all downtime data flows back to MEDITECH instantly.

No manual re-entry. Recovery takes hours, not days.

07 Maintain Clinical Workflows

Triage patients and store vitals electronically using dbtech's Clinical Workflow solution.

Treatment options and medications administered can be recorded throughout the outage.

Don't let an EHR outage slow your team down. dbtech's Downtime Solution keeps your operations running electronically, through any outage, planned or unplanned. Schedule a free Downtime Audit Assessment at dbtech.com
